Summary

Frontend-focused Fullstack Developer with 4+ years of commercial experience building scalable, high-performance web applications using React, Next.js, and Node.js.

Specialized in developing enterprise-grade internal systems with a strong focus on performance optimization, maintainable architecture, and user experience.

Experienced in modern frontend ecosystems, including state management (Redux Toolkit, Zustand), server-side rendering (Next.js), and performance optimization techniques (Core Web Vitals, lazy loading, memoization).

Proven track record of improving application performance (up to 30%), optimizing APIs and delivering reliable end-to-end solutions used by business-critical teams.

Technical Skills

Frontend:

- React, Next.js (App Router), Vite, React Native
- TypeScript, JavaScript (ES6+)
- Context API, Zustand, TanStack Query (React Query), Redux
- Material UI, DevExtreme, SCSS, HTML5, CSS3
- Performance optimization (Core Web Vitals, lazy loading, memoization, SSR)

Backend:

- Node.js, Express.js
- REST API design
- Authentication: JWT, MSAL, Clerk

Database:

- MongoDB, Mongoose
- PostgreSQL, Prisma

Testing:

- Jest, React Testing Library

DevOps & Tools:

- Git, GitHub
- CI/CD (GitHub Actions)

- SharePoint + Plumsail Forms
- Azure

Professional Experience

Software Developer

QSense (2022 - Present)

- Developed and maintained 4+ internal enterprise systems (HR, recruitment, training platforms) used by 100+ employees
- Developed scalable React applications using TypeScript and modern state management (Redux Toolkit, Zustand), reducing unnecessary re-renders and improving UI performance
- Designed and implemented REST APIs using Node.js and MongoDB, handling thousands of records daily
- Improved application performance by ~30% through frontend optimizations (memoization, efficient state management)
- Reduced API response times by ~25% by optimizing database queries and backend logic
- Built mobile-friendly applications for quality control, enabling real-time data collection in the field
- Collaborated with cross-functional teams to deliver production-ready solutions in iterative releases

Fullstack Developer

Freelance, part-time (2019 - Present)

- Delivered 10+ custom web applications using React, Next.js, and Node.js
- Built complete fullstack systems including UI, backend APIs, and database architecture
- Implemented authentication and role-based access control for secure applications
- Improved page load performance by 20-40% using modern optimization techniques
- Designed responsive UIs supporting both desktop and mobile users
- Worked directly with clients to gather requirements and deliver tailored solutions

Projects

GoBig Forms (Main Project)

Tech: Next.js, TypeScript, Clerk, Prisma, PostgreSQL

- Designed and developed a SaaS-style form builder (similar to Typeform) application with drag-and-drop UI creation capabilities
- Implemented dynamic form rendering and public sharing via generated URLs
- Built secure authentication and user management using Clerk
- Developed a dashboard for form owners with analytics (created, submitted, incomplete forms)
- Enabled real-time data collection and storage with structured backend architecture (Prisma + PostgreSQL)
- Focused on scalability, clean architecture, and user experience for non-technical users

Live: <https://gobig-forms.vercel.app>

Recruitment Management System (Commercial Project)

Tech: React, Node.js, MongoDB

- Implemented MSAL authentication and employee management

- Built candidate tracking system with filtering and search functionality
- Developed role-based access control system
- Created dashboard for recruiters and administrators
- Improved recruitment workflow efficiency and usability

Quality Control Application (Mobile System)

Tech: React Native, Node.js, MongoDB

- Developed mobile-friendly data collection system used in operational environments
- Enabled real-time validation, reducing data entry errors by ~20%
- Designed UI optimized for field workers, improving usability and adoption

Learning AI - Self-Driving Car Simulation

Tech: TypeScript, HTML Canvas

- Implemented object-oriented architecture using design patterns (singleton, factory)
- Built training system allowing users to iteratively improve and persist the best-performing „brain” model
- Designed interactive UI controls for training, testing, and saving AI progress
- Focused on algorithmic thinking, performance, and real-time rendering using Canvas API

Live: <https://ai-car.vercel.app>

Portfolio Website

Tech: Next.js, TypeScript

- Implemented SSR and SEO optimization
- Achieved 90+ Lighthouse performance score

Live: <https://pszym-portfolio.vercel.app>

Key Strengths

- Strong focus on clean code (DRY, KISS principles)
- Experience building scalable internal business systems
- Performance optimization mindset
- Ability to translate business needs into technical solutions
- Experience working both independently and in teams

Education

Wrocław University of Science and Technology

Master of Science - Management and Production Engineering

Languages

- Polish - Native
- English - Professional (B2/C1)
- German - Communicative
